HOT Watch Release Notes

Version 1.6.1
Date: 2/5/16

Version 1.6.1

- Double touch/tap to switch on backlight on main screens
- Tilt gesture to switch on backlight (supported in all gesture on mode (in settings1 screen)). Other all gestures still work as before
- Extra communication protocol to support iPhone App version 2.0 with new user interface(The new app will still work older version of watch)
- When watch is in right hand mode, the OK in the unlock message box was not working. Issue Fixed

Version 1.6.0
Date: 11/6/15

- Changes to iPhone BLE connection to support new iOS9 HOTWatch app with new Bluetooth driver.

Version 1.5.9
Date: 9/22/15

- European accented character support with first 256 characters of UTF-8

Version 1.5.8
Date: 9/18/15

- Unlock message box with OK-Cancel option. OK will unlock the screen
- When 24 hour selected on first watchface, all default digital watchfaces will display 24hr
- Bluetooth and Battery icon display on Watchface 3
- Start Pedometer Inactive time after 8AM

Version 1.5.7
Date: 9/2/15

- Watch reset issue during call answer and other conditions fixed.
- Hour needle in the new Watchface 2 had occasional refresh issue. Fixed

- Alarm and Timer was not accepting OK when the screen was locked. Fixed

Version 1.5.6
Date: 8/3/15
- Watchface Screen gets auto locked if left in any watchfaces for more than 1 minute.
    o Lock icon displayed at bottom right corner
    o Any long touch at night (7pm to 6am) will switch on backlight.
    o Any touch slide gesture will display screen locked message
    o Any icon touch will display screen locked message
    o Touch gesture U or Power button press unlocks screen
- Improved notification screen formatting with better alignment
    o Larger title with underline
    o Smaller text
- Changes to Watchface 2 with background image

Version 1.5.5
Date: 7/9/15
- Support for Phone call from watch using Voice Response (VR) initiated from watch
- Small vibration indication when call is answered with hand up gesture

Version 1.5.4
Date: 6/22/15
- Software won't allow firmware download if the watch battery level is below 2 bars. This will prevent condition where watch battery dies during critical time of firmware switching.
- Improvements to Bluetooth to prevent no audio during call (noticed more in Galaxy S4)
- Recovery from module when module goes into bad state after many calls in some phones (S4 etc)

Version 1.5.3
Date: 6/1/15
- Issue with Firmware download on 1.5.2 iphone fixed
- Call switching issue of 1.5.2 fixed
- Nexus phones with lollipop had issue with downloading contacts. The issue fixed

Version 1.5.2
Date: 5/26/15

- BLE Reconnection improvements to support updated iPhone app 1.0.7
- Improved prevention of call switching, especially with EnableBTOff option on
- Lock screen icon size increased for visibility.

Version 1.5.1
Date: 5/15/15

- Version 1.5.0 had an issue Bluetooth reset and call switching in certain conditions. This issue is fixed.
- Lock Icon display at bottom right when screen locked (Displayed on all information screens when locked)
- Bluetooth BLE, SPP and Battery full indications are supported in custom watchfaces (Might not work if SDK watchface Bluetooth icons are near screen edge).
- Backlight still works with lock screen. For unlock, user has to press long power button press or double click of power button
- Improvements to EnableBtOff option where phone Bluetooth connection (HFP) is disconnected when call is made from phone. This option is provided to prevent call switching in some android phones.

Version 1.5.0
Date: 5/5/15

This version is a Major update with all the hardware drivers re-written with energy optimization. We are continuing our improvements in energy as there is still room for some more improvements that will be done in the next version.

- Longer Battery Life: Important Hardware Driver Change
  - Should get 4+ days battery life with default energy mode (pedometer off and watch off the hand at nights)
- SMS Reply List when Auto reply is selected for SMS
  - "Busy Right Now"
  - "OK"
  - "Thank you"
  - "Call you later"
  - "Custom" (Configurable string to be set in Phone App)
- SMS Reply supported in iPhone (iPhone App with this support to be released in 2 weeks)

- Studio Custom watchfaces was supporting only one custom needle for all 3 studio analog watchfaces. Problem fixed. Analog watchfaces can be loaded in screen 1-3 with their own custom needles.
- Splash Animation at startup.
- Battery level bars improved accuracy
- 24hr clock was displaying 12 hour clock after next hour. Bug fixed.
- Bluetooth Connection improvements
- Accelerometer calibration for better gesture and Pedometer accuracy. This optional step can to be done one time. The previous calibration done at production was not saved in current watches
  - o Go to Calculator Screen
  - o Keep the watch on flat surface so that the glass is flat
  - o Touch %123 to start calibration
  - o Wait for the calibration screen to complete

Version 1.4.6
Date: 3/25/15

- Hardware
  - o Display Refresh improvements: Important hardware change
  - o Fixed hardware condition that was causing continuous watch reset under certain conditions
- Pedometer
  - o Icon3 pedometer info screen indicates ON or OFF with standing or running icons
  - o Icon3 pedometer screen will refresh every second for first 90 seconds. Previously this was supported only on main pedometer screen.
- Call
  - o Reduced ringer volume on watch for iPhone connected watch close to mute volume. The ringer will not be heard on the watch
  - o When calls are made or received on phone, watch will not display call screen. Watch can be used normally during calls made from phone
- Improved Bluetooth reconnection
- Alarm1, Alarm2 and Countdown timer is repeated (8 times with 30 sec duration) till user touches OK
- Voice Response button for SMS reply for iPhone. User can use VR to respond to SMS.
- Increase volume for VR. We will include VR volume control in the future version
- Improved hands on call answer gesture.
- Display only pending meeting reminders for the day in Icon3 calendar.

- **The Bluetooth disconnections (due to Bluetooth radio error) has been fixed. The Bluetooth connection should be more stable.**
- Support new watchface studio with screen numbers
- Better alignment of studio watchface icons
- After downloading the custom watchface, user can roll back to original watchface
    o Long touch on custom watchface will take you to original watchface
    o Long touch on any standard watchface will take you to custom watchface (if loaded)
    o If the standard watchface supports second display (with long touch), another long touch during second display will take you to custom watchface (if loaded)
- Icon 1(watchfaces) and Icon 3 (information screens) are not defaulted to first screen. User can leave them on any watchface or information screen they desire.
- Watch will not accept new firmware download immediately after BLE connection (to overcome Bluetooth issue)
- Changed the CELL display to MOBILE in contacts dial out screen
- Charger FULL indication is shown when full charge is reached.
- Weather is displayed as NA if no update is received for today
- Weather information can be switched to F or C with a long touch in weather screen.
